

## Reviewer Response Report-

We tried our best to improve the manuscript and made some changes marked in Yellow color,

- Provide a brief introduction to the topic under investigation.
  - *Offered an introduction to the article to better lay out the thesis.*
- Explain the significance of the topic within the field.
  - *I explained the significance in the introduction and literature review to ensure the reader understands the thought under examination.*
- Identify the research gap.
  - *I intimated this in the beginning of the article and subsequent sections.*
- State the research question(s) or aim(s).
  - *The research question is posed after the lit review and before methodology.*
- Outline the research methods and approach.
  - *Updated methods section as per the review and made it stronger with a data analysis section.*
- Convey the key message.
  - *Achieved this.*
- Summarize the key findings.
  - *Identified a results section.*
- Explain the contribution of the findings and key message to the field(s).
  - *Made a concluding statement about how clients are participant-leaders and assets to a community.*

From my understanding of writing a research article, the structure typically includes:

1. Abstract: No need intext references
2. Introduction: Provides an overview of the article or research project, including its objectives.
3. Literature Review: Reviews relevant articles and concepts related to the research.
4. Methodology: Describes the research methods employed.
5. Results
6. Discussion

The current article does not adhere to the structure expected of a research article.

*I followed the outline to ensure the article conformed to the layout of a research article.*
