

Reviewer comment-2

This paper is suitable for publication following minor revisions. The Introduction should be expanded to illustrate the interrelationships between variables such as grit, social support, and academic success. Additionally, the study's objectives should be clearly stated in this section rather than leaving the readers to infer them until page five. The section on Grit requires further elaboration on this construct. In the Materials and Methods section, it is necessary to include a description of the research setting and specify the sampling method used. A paragraph detailing the data analysis process should be added. Furthermore, more comprehensive information should be provided regarding the process of obtaining participant consent. The research setting should also be utilized to discuss the findings, provide context, and enhance the interpretation of the results.
