

Reviewer-1

This abstract makes many statements that should be back using references. For example - what is the reported incidence of mold? Next, the causes of mold. Then what are the health care issues and that incidence rate. Finally, what is being done and what are the industry failures?

Where are the references? This paragraph should be dedicated to orientating the reader to mold in housing - why that is an issue, ect....

This paragraph is very much out of place. Perhaps an orientation to the different types of mold found in housing should be the text.

If the preceding paragraph discussed the different types of mold, then the following paragraphs could discuss diagnostic processes for determining mold issues.

Consequences of mold damage should also be broken into to topic sections: building damage; health risks (with sub-titles for particular types of health risks)

This paragraph is out of place. The next paragraph should discuss industry standards... this particular paragraph should be "Recommendations to close industry gaps"

This paragraph would lead nicely into the Recommendation to close industry gaps - Experts in the field.

The paragraph is poorly written - a sentence should not start with "Suppose". However, once industry failures are discussed - then consequences of industry failures should be discussed.

Over all the paper would need assistance in organization, additional referencing, a writing program to assist with verb tense, sentence structure and paragraph design
