

Reviewer 1, indicated no revisions and recommended publication as is. We greatly value your expertise and would appreciate your confirmation of receipt of this email and any further modifications you may suggest.

Thank you for your time and attention to this matter. We appreciate your efforts in handling our manuscript.

Response from Reviewer 2

I changed the article title as per reviewer comment.

I included specific statistical results (e.g., R^2 , significant β values) in the abstract to strengthen its scientific clarity as suggested.

The proposed grammatical revisions and restructuring of sentences in certain sections, including Results and Discussion, have been thoroughly reviewed utilizing Grammarly. Additionally, several punctuation errors in accordance with APA guidelines were rectified in the citations.

I provided a more concise conclusion statement. Tables were reconfigured in SPSS Table-Looks and adjusted to meet publication standards.
