

Review Comments-2

This paper offers a timely and insightful examination of the complex relationship between cybersecurity and human rights in the context of rapid global digitalization. By drawing on comparative case studies of the United States and China, the authors effectively highlight contrasting governance approaches and their implications for privacy, freedom of expression, and civil liberties.

Recent Literature Integration:

To enhance the paper's scholarly rigor and ensure alignment with current discourse, please include at least five (5) recent references (published within the last three years). These should cover recent advancements, international legal frameworks, or case studies relevant to the intersection of cybersecurity and human rights.

Formatting and Professional Presentation:

Ensure the manuscript follows a professional academic format, including consistent citation style, clearly labeled sections and a properly formatted reference list. Adherence to the target journal's style guide is highly recommended.
