

Review Comments-1

Consider providing 1-2 specific, recent examples of security incidents at community colleges to strengthen the urgency and concreteness of the problem

Well done - good integration of empirical data

Adequately addressed

The actual achieved sample size and final response rate are not clearly stated. You mention "typical studies report 20-40%" but don't explicitly confirm your actual response rate. This needs to be stated clearly upfront.

The discussion of urban vs. rural and large vs. small institutional differences is excellent, but it would strengthen the paper to briefly indicate how you addressed or plan to address these variations in your analysis (e.g., subgroup comparisons, stratified reporting)

This demographic information should appear earlier in Chapter 3 under Population and Sample, not buried in Chapter 4

Excellent triangulation discussion
