The advances in AI and the adoption of AI tools are quickly outpacing our understanding of them This article is very timely and will be very useful to partitioners and educators.

Overall, the is exceptionally well-written paper. The sections are appropriate for a review paper.

The included table does an excellent job identifying the most important "lessons learned".

I would have liked to have seen a deeper description of the cited references. In most cases, each reference is described in one or two sentences.

For example, African *nations are pioneering AI-enabled telemedicine to extend services to remote and rural areas, simultaneously requiring new competencies for health workers in digital literacy and virtual care (Makani et al., 2021).*

I would have liked to have seen more detail about these services were extended and description of new competencies. I think this would strengthen this manuscript.

As it is, the is a great contribution to literature and will be useful to educators and practitioners. More detail about the specific innovation, requirements, etc would only strengthen its impact.
