

## Second Review response

Dear Deepika,

Thank you for recommending our manuscript for acceptance with optional minor revisions. We appreciate the constructive feedback and are pleased that the revisions have addressed the major concerns.

We have carefully reviewed the remaining minor issues and made the following updates:

**Feasibility metrics:** We clarified in the manuscript that setup time was not quantitatively measured and have explicitly noted this as a limitation.

**Table formatting:** All tables have been reformatted for consistency.

**Multiplicity limitations:** We have retained the focus on effect sizes in the discussion and have clarified that multiplicity was addressed in the results section, without overemphasis on p-values.

We appreciate the opportunity to submit these final minor revisions, and we are excited to hear about the next steps.
