

Reviewer Comments-2:-

1. This is a very important and timely topic. The suggestions outlined in the manuscript can help with implementation of BTA, as well as guide future empirical/evaluative work. I believe the article is aptly titled.
2. Maybe adding a sentence highlighting suggestions for implementation that the manuscript will touch on can help give readers an understanding of where the manuscript is going.
3. I believe all included sections are necessary to the manuscript.
4. There are two references (both by Jackson and Viljoen) that are heavily cited, but I do not see them in the Reference page. I also add some comments where it would be helpful to provide a citation to support claims being made.
5. **I made some small comments throughout the manuscript about citations and editing one typo that I think should be addressed.**
