

The revised article aligns well with the reviewer comments, but two small items remain unaddressed.

Abstract revisions

Reviewer suggested:

- Consider noting the analyzed sample size ($n = 18$)
- Consider mentioning dropout rate
- Add a final sentence noting implications for practice

Status:

The revised abstract still does not state sample size or dropout rate and does not include a final implications statement.

Match: Partially. This is one of the only areas not revised per reviewer suggestions.

Final Determination

Yes, the revised article matches the online review form in all substantive areas except one: The abstract does not reflect the reviewer's suggested additions (sample size, dropout clarification, and a final implications sentence)
