

Thank you for the opportunity to review the revised manuscript, *“The Anatomy of Assessment: Competency-Based Educational Outcomes in a Doctor of Physical Therapy Anatomy Course.”*

After careful review of the revised manuscript and the detailed response to reviewers, the authors have **appropriately and thoroughly addressed all prior reviewer comments**. The revisions have significantly strengthened the manuscript by improving the clarity of the study design, explicitly defining competency frameworks and remediation processes, enhancing conceptual transparency through figures, situating the findings within the broader health professions education literature, and appropriately bounding conclusions given the study design.

At this time, I have **no additional substantive revision requests**.

Recommendation:

Accept for publication (no further revisions required)

Thank you,
