

Review comment-2

The manuscript is highly relevant to the field of social work, especially regarding the deinstitutionalization of mental health services. It provides a historical timeline of the deinstitutionalization process and outlines the intended goals for individuals and communities. To enhance the manuscript's focus and depth, the author should expand the introduction to about 10% of the total article length, grounding the discussion in current and relevant literature. Furthermore, all paragraphs should be grounded in relevant literature. Including citations from current research will strengthen the manuscript's relevance and credibility.

The title is generally suitable; however, I recommend revising it to enhance its appeal to a broader audience.

The abstract is well-constructed and effectively outlines the topics discussed. However, it could be enhanced to create a stronger impact and better capture the reader's attention.

The Introduction should be expanded to make up 10% of the total length of the paper. It is recommended to include a Literature Review section, which should contain a historical background as a subtopic. Additionally, the manuscript should address practical implications and include a conclusion section.

The references provided are adequate and adhere to the guidelines established by the APA format.
