

Review comment -2

It provides qualitative information of student perceptions during the COVID-19 pandemic. This will help inform quantitative studies that align with this research question regarding impact to higher-education and students' practice-based education.

Title could be more descriptive regarding the purpose of the research..

Specific Comments:

Good manuscript, here are some suggested edits:

- Author should add page numbers in manuscript.
- Review formatting of tables to improve readability, some columns “run together” which may create reading difficulty when published. Also, review line spacing after tables, i.e. need a line space after Table 1 descriptive narrative and Table 2 title.
- Limitations: should include limitations section to discuss limitations of current study, impact to findings, and/or steps taken to minimize identified limitations/bias.
